

# FASTER LOGISTICS USING MOBILITY SOLUTION

Saksoft supported one of the logistics software think-tank in revolutionizing the logistics business

## CLIENT OVERVIEW

The client is a market leader in logistics software solution and specialized in providing services on - Courier, Road Freight, and Distribution & Warehousing software. The client specializes in Transport software, Warehouse software, Mobile software, Document management software.

**Client**  
Software Product Company

**Industry**  
Logistics & Transportation

**Service Offering**  
Mobile Application Development

Saksoft proposed a cross platform development environment called Xamarin to develop an application that would seamlessly work on Android or iOS phone.

## Business Challenge

Client wanted to have real-time visibility of collections and deliveries and wanted a solution that allowed the users to capture information using any type of phone.

## Business Solution

Saksoft proposed a mobility solution that could manage delivery and collection operations using a mobile app which enables route optimization, job tracking, image capturing and proof of delivery signature as well as delivery compliance with real-time communication between drivers and head office. We used cross platform development environment called Xamarin to develop a seamless application to work on Android or iOS phone. The business analyst from Saksoft gathered all requirements to create a feature list for first launch on Android. The UX/UI team wireframed the complete flow to enable high user adoption with least learning curve. The team developed a prototype to showcase the options to the client. Once the application look and feel was confirmed, using Xamarin we developed native applications for android which could later be extended to iOS and Windows too.

## Business Benefits

- 15% overall improvement in business processes
- Increased productivity per employee
- Real time status of collections and deliveries
- Reduction in back-office data capture
